**DETAILED ACTION**

***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1 – 17 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

1. Claims 1 – 13 are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential structural cooperative relationships of elements, such omission amounting to a gap between the necessary structural connections. See MPEP § 2172.01. The omitted structural cooperative relationships are: Regarding claim 1, it is unclear as to how the algorithm is used by the controller in calculating the concentration of the solutions. What specific knowledge (e.g., solution resistivity, conductivity, temperature, density, etc.) is the algorithm based upon? Regarding claim 8, it is unclear as to how the solution resistance and temperature is used in calculating the solution concentration. The structure which goes to make up the device must be clearly and positively specified. The structure must be organized and correlated in such a manner as to present a complete operative device (See MPEP § 2172.01). Furthermore, a feature that is taught as critical in the specification should be recited in the claims (see MPEP § 2164.08c).

2. Claims 14 – 17 are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential steps, such omission amounting to a gap between the steps. See MPEP § 2172.01. The omitted steps are: Regarding claim 14, it is unclear as to how the solution

resistance and temperature is used in calculating the solution concentration. Does the methodology incorporate the use of a specific formula for calculating the solution concentration using solution temperature and resistivity as variables?
